

PastSafe: Integrity inspections of your process line

Bactoforce Heatexchanger Inspections

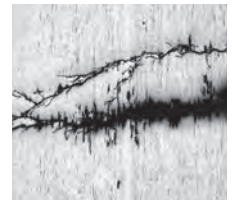

CIP Validation

Inspect for organic residues in the heat exchanger.

Leakage test

Avoid harmful cross-contamination in the heat exchanger.

Heat exchangers are a critical control point in food processing lines. Bactoforce offers a one-stop solution for a full integrity test of your equipment.

Heat exchanger integrity testing includes inspection for:

- Internal leakages between product and energy side
- External leakages via gaskets
- Organic residues (biofilm)
- Holding time test
- Diverter valve reaction time test
- Sensor calibration

All reports are stored and made on-line available for easy access when needed.

Bactoforce inspection standards

Inspections are performed according to high standards by trained and qualified inspectors:

- Non-Destructive inspection
- ISO 9712, DIN EN 473

- Safety training (confined space and working at height)
- Experience in the food industry

Working with Bactoforce

In Bactoforce, we recognise that our job is to make you feel safe about the condition of your process line.

We take the responsibility for planning, coordination, safe execution, reporting and follow-up on the inspection activities.

Other inspection services include:

- Inspection of spraydryers and silotanks
- Inspection of tanks and vats
- Endoscopy

Bactoforce in brief:

- 20+ years of inspection experience in the food sector.
- Best practice inspection methods customised to food production facilities.
- Trusted partner to some of the leading brands in the industry in Europe.

Use Bactoforce to validate your equipment, prevent microbial problems and troubleshoot to find the source of a problem.
